## SEED SITUATION

Weather conditions last fall were against satisfactory legume seed production with Alfalfa suffering most. Such states as Nebraska, Utah and Idaho, which usually produce large quantities of Alfalfa, are particularly short with even smaller supplies of Michigan, Ohio and Indiana seed available. Oklahoma and Kansas Alfalfa seed production is comparable to past years. The seed is as weed free and of about the same purity as usual but because of rains and frost at harvest time is off some in color and weight.

Red Clover seed production in the Central States is short but a good deal of fine quality seed was produced in Idaho. Additional Lend Lease purchases as well as smaller production has reduced supplies but there should still be enough Red, Mammoth and Alsike to go around.

With the exception of some of the early Hybrids, Seed Corn supplies should be ample with possibly a small amount of substitution of one Hybrid for another necessary.

### SCOTTS MEADOW MIXTURES

Ready mixed and suitable for hay, silage and rotation pastures. Formulas are those recommended by the Experiment Stations. The Alfalfa Mixture is for high lime soils adapted to Alfalfa growing and contains Alfalfa, Red Clover and Timothy. The Red Clover Mixture is for medium lime soils adapted to Red Clover growing. It contains Red Clover, Alfalfa, Alsike, Ladino Clover and Timothy. The Red Clover-Alsike Mixture is for soils not sweet enough or where drainage is inadequate for satisfactory Alfalfa or Red Clover seedings alone. It contains Red Clover, Alsike, Ladino Clover and Timothy.

### ECONOMICAL PRODUCTION

Vigorous, high germinating seed is needed to get maximum production of corn, small grains, meadows, pastures, soybeans or other crops. But even this kind of seed can be wasted if seeding is carelessly or hurriedly done. The information gathered through practical experience and recommendations by the Experiment Stations should be used to insure the highest possible yields and to avoid thin stands and unsatisfactory production.

Yours truly

O M SCOTT & SONS CO

P S Our Hybrid Corn folder is enclosed. We believe you'll enjoy it. Next issue of Scotts Farm Bulletin will discuss corn leaf blight, corn borer, kernel depth, thickness of planting and other factors contributing to yields per acre.

# Seed Price List

January 30, 1943

"SCOTT'S" grade is the highest quality seed available. It is carefully selected and thoroughly re-cleaned. Noxious weed free. May contain 0.10% to 0.15% other crop seed and in most cases will test 99.75% pure.

SPECIALS: The grades marked "special" may be slightly off in appearance or contain one or two percent of other clovers or crop seed. This seed is clean and perfectly safe to sow.

Seed prices subject to prompt acceptance. No Charge for Bags

## RED CLOVER

Scotts Medium Red.....	\$19.50 bu.
Special Medium Red.....	18.50 bu.
Scotts Midland .....	23.50 bu.
Scotts Mammoth .....	18.50 bu.
Special Mammoth .....	17.50 bu.
Mammoth (With 6% Sweet)	16.00 bu.

## ALSIKE CLOVER

Scotts Alsike .....	\$19.80 bu.
Special Alsike .....	18.80 bu.

## SWEET CLOVER

## Scotts Seed for Sunny Lawns

This is the finest blend of grasses for open or lightly shaded lawns. Triple cleaning makes it 99.91% weedfree. Its choice perennial grasses build permanent and deep-rooted turf. The content of Creeping Bent adds sparkling color and increases resistance to weed invasion.

## Scotts Seed for Shaded Lawns

The best selection of special perennial grasses for areas receiving less than half a day of sunlight. Produces brilliant green lawns under trees and between houses. This grass harmonizes in color and quality with turf produced by other Scott Seeds. It is guaranteed 99.91% weedfree.

## Scotts Creeping Bent Seed

For over 20 years Scotts Creeping Bent has been making velvety home lawns and championship golf putting greens. Suitable for building new lawns or sowing into old lawns in full sun or partial shade. Goes twice as far as other seed, so less is required—see rate chart on other side.

**White Clover** is not used in Scott mixtures because it is better sown alone. Use sparingly with Scotts Sunny Seed—at rate 1/4 to 1/2 lb. to 1,000 sq. ft.

## Scotts Turf Builder

To get the most out of your planting of Scotts Seed, apply Turf Builder just before the seeding. This special grass food brings out the full beauty of a Scott lawn; makes it thick and sturdy. Ten pounds is enough for 1000 square feet of established grass; use twice as much before seeding bare ground.

**Scotts Garden Plant Food**—will help you get greater production out of your fall Victory Garden crops. Use a little after harvests to aid decomposition of stubble and roots. Scatter 3 to 4 pounds per 100 square feet. Sold for food production only.

**Lawn Care** All bulletins to date assembled in a file with heavy paper binding at 25c and in a de luxe, loose-leaf binder at \$1.

### *How Much will You Need?*

It is easy to estimate how much Scotts Seed you need when you use 1,000 sq. ft. as basic measure. Multiply width of your lot by depth in feet—then deduct about one-third for space taken by house, gardens, garage and walks.

EXAMPLE: Lot size—100 ft. x 75 ft.—7,500 sq. ft.—less one-third (2,500) makes 5,000 sq. ft. of lawn area.

#### **Requirements for Starting NEW LAWN on 1,000 Sq. Ft.**

Scotts Seed for Sunny Lawns.....	5 lbs.
Scotts Seed for Shaded Lawns.....	5 lbs.
Scotts Creeping Bent.....	3 lbs.
Turf Builder (grass food).....	20 lbs.

To thicken a fair stand of grass use about half as much Scotts Seed and Turf Builder as suggested in the above chart.

There is no advantage in sowing excessive quantities, in fact a too thick stand may result in smothering.

Keep plenty of Scotts Seed on hand for later patching. The seed will keep for several months without appreciable loss in viability if stored away from extreme heat and moisture—almost any unheated location is satisfactory.

### *Complete directions in every package*
